

Windows 2025 ANSIBLE SSH

Ramon Silas Shockness Alfonsin

Visão Geral

Usar o Ansible com acesso SSH ao Windows Server 2025 traz uma série de benefícios.

1. Automação de Tarefas Administrativas

- Automatize tarefas como instalação de software, configuração de serviços, gerenciamento de usuários e permissões.
- Reduz erros humanos e aumenta a consistência das configurações.

2. Gerenciamento de Múltiplos Servidores

- Com um único playbook, você pode aplicar configurações em dezenas ou centenas de servidores Windows simultaneamente.
- Ideal para ambientes híbridos com Windows e Linux.

3. Uso de SSH: Mais Simples e Seguro

- Evita a complexidade do WinRM (tradicionalmente usado com Windows no Ansible).
- SSH é mais leve, mais seguro e mais amplamente suportado em ambientes modernos.

4. Integração com Infraestrutura como Código (IaC)

- Facilita a integração com ferramentas como Git, Jenkins, Terraform, etc.
- Permite versionar e revisar configurações como código.

Para usar o **Ansible com acesso SSH ao Windows Server 2025**, há alguns requisitos e configurações importantes que você precisa seguir:

✅ Requisitos no Windows Server 2025

1. OpenSSH já vem instalado por padrão:

- Não é necessário instalar manualmente.
- O serviço `sshd` (servidor SSH) precisa estar **habilitado e configurado para iniciar automaticamente**:

2. Abrir a porta 22 no firewall:

```
1 New-NetFirewallRule -DisplayName "Allow SSH" -Name "AllowSSH" -Profile Any -LocalPort 22 -
  Protocol TCP -Action Allow
2
```

</> Plain Text

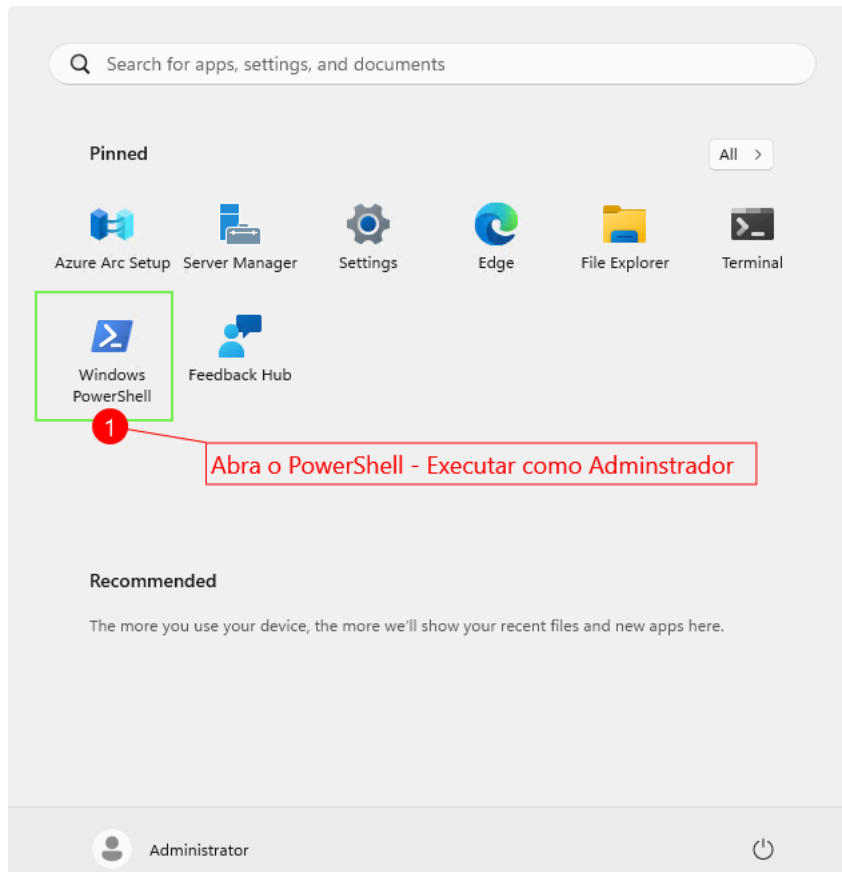

3. Definir o PowerShell como shell padrão para conexões SSH:

- Isso garante que os módulos do Ansible funcionem corretamente:

```
1 New-ItemProperty -Path "HKLM:\SOFTWARE\OpenSSH" -Name DefaultShell -Value  
  "C:\Windows\System32\WindowsPowerShell\v1.0\powershell.exe" -PropertyType String -Force  
2
```

4. Reinicie o servidor ou o serviço **sshd** para aplicar as mudanças.

👉 Verificando status do servidor

```
1 get-service -name sshd  
2
```

Administrator: Windows Powe x + v

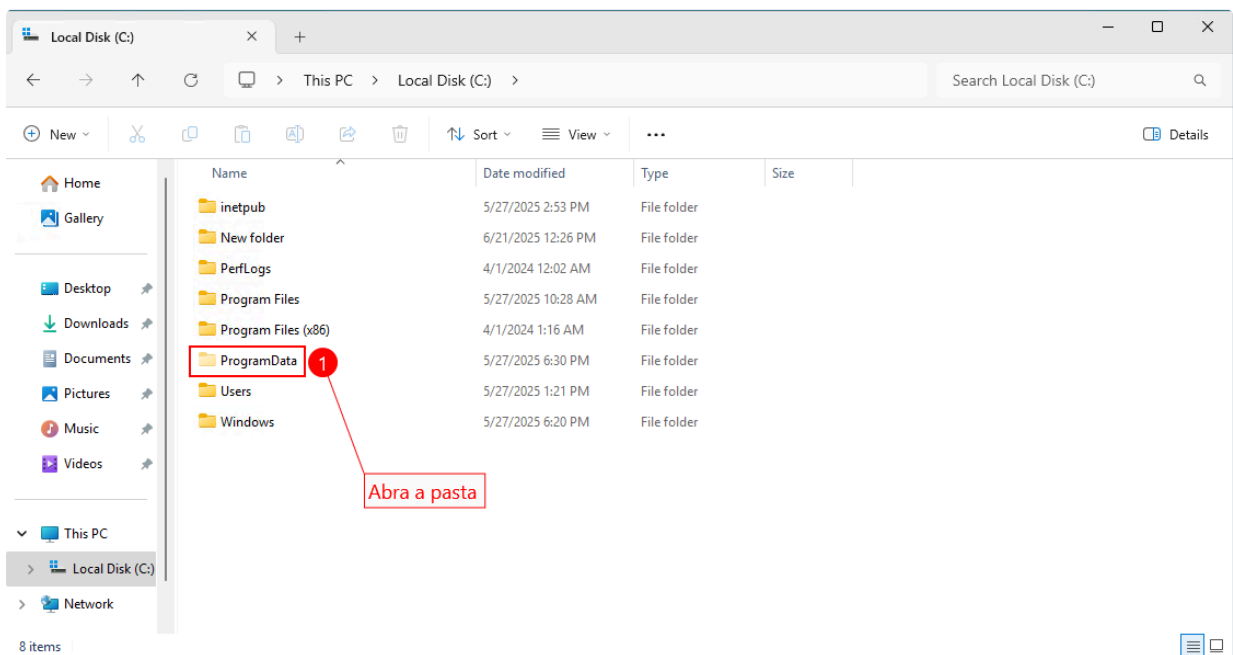

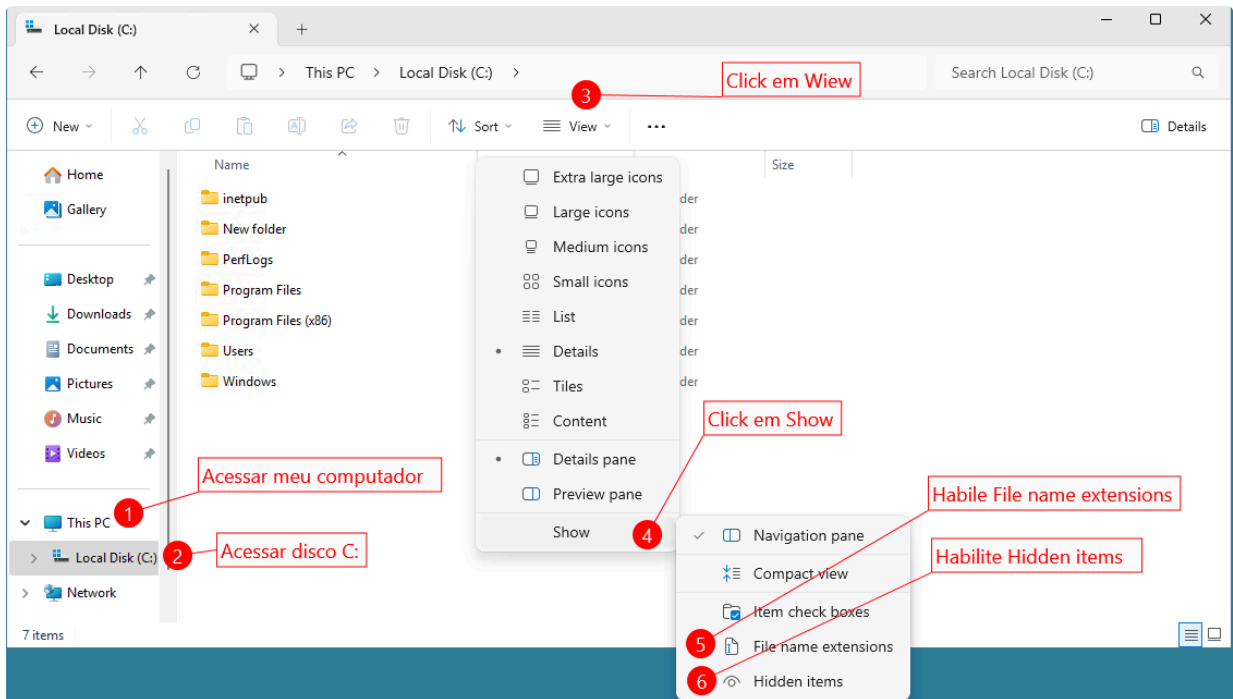

Windows PowerShell
Copyright (C) Microsoft Corporation. All rights reserved.

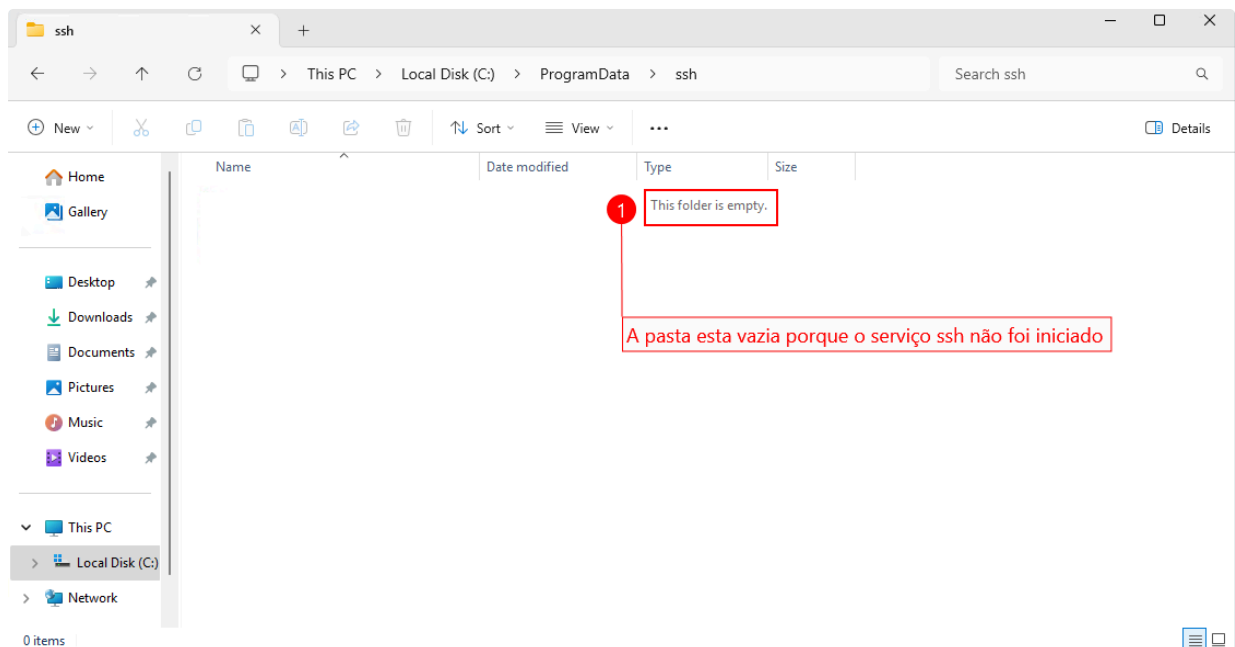

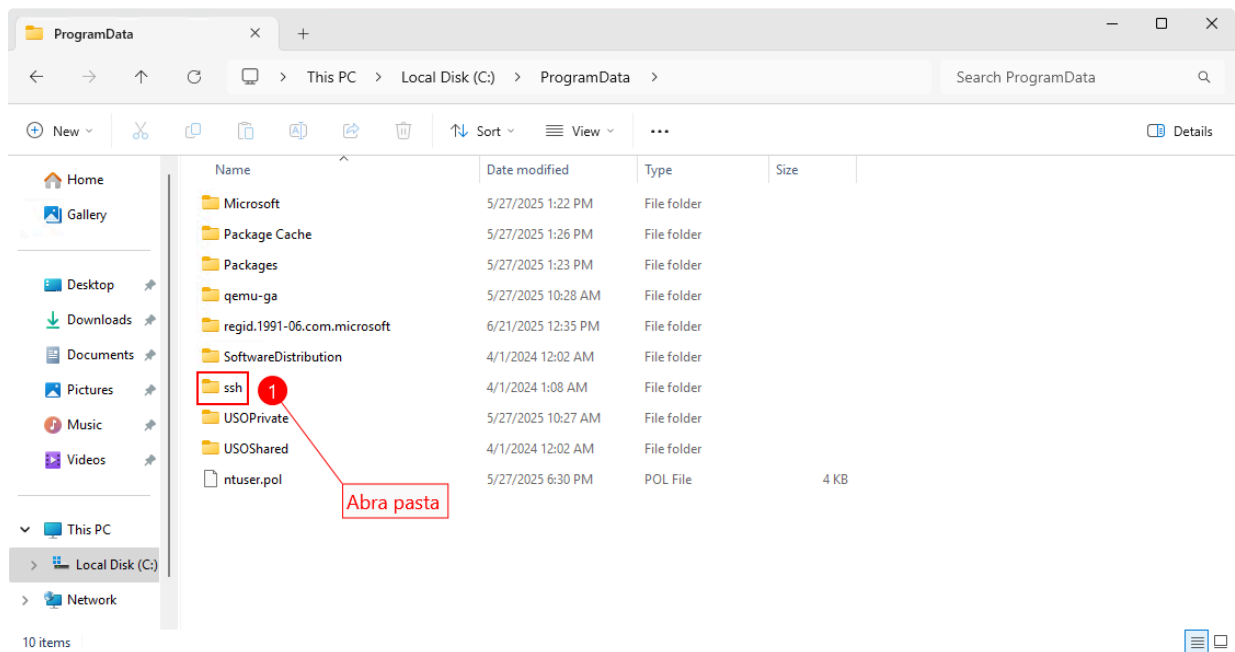

Install the latest PowerShell for new features and improvements! <https://aka.ms/PSWindows>

PS C:\Users\Administrator> **get-service -name sshd** 1 — Verificando status do serviço ssh

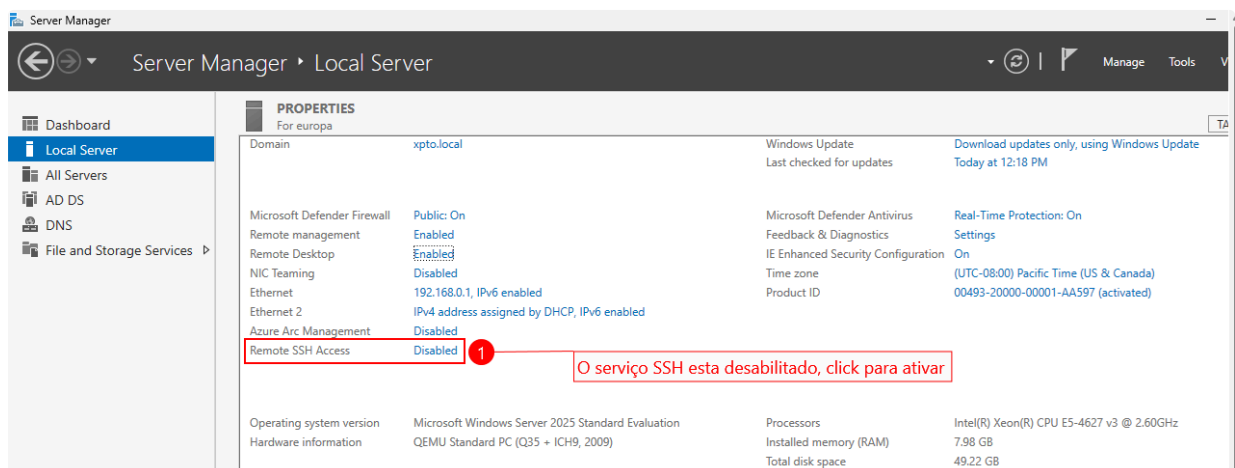

Status	Name	DisplayName
Stopped	sshd 2	OpenSSH SSH Server

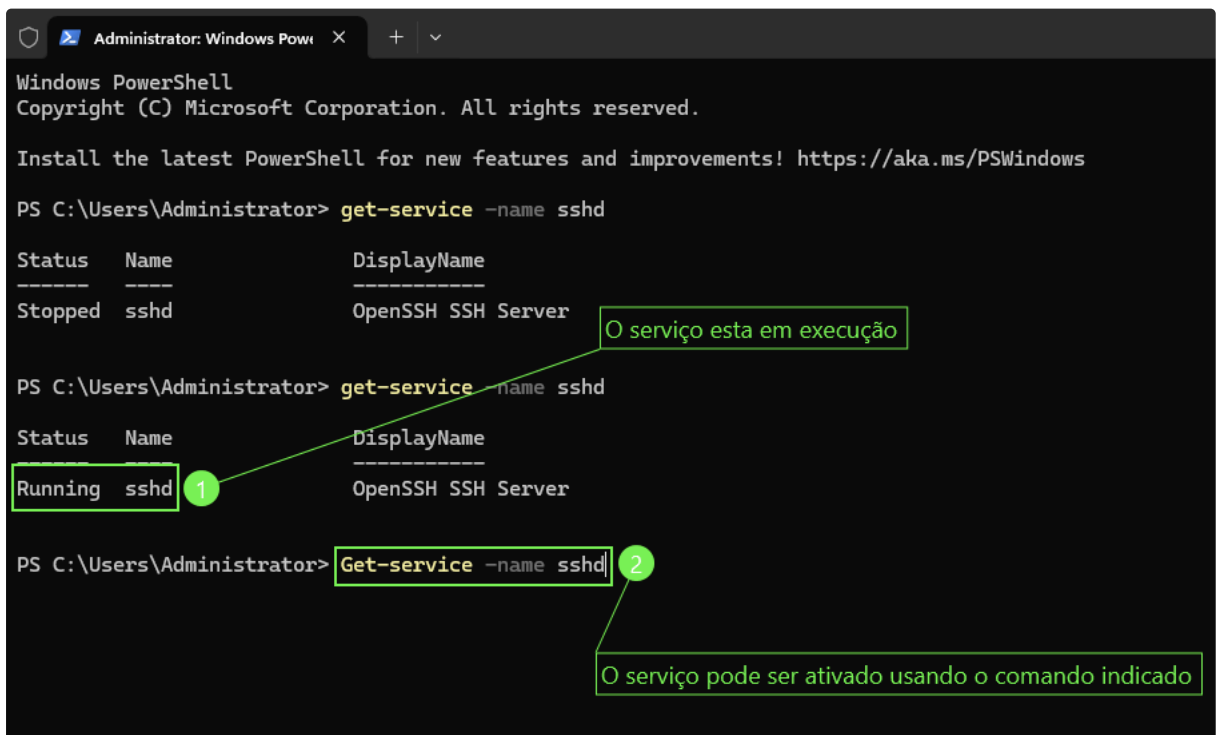

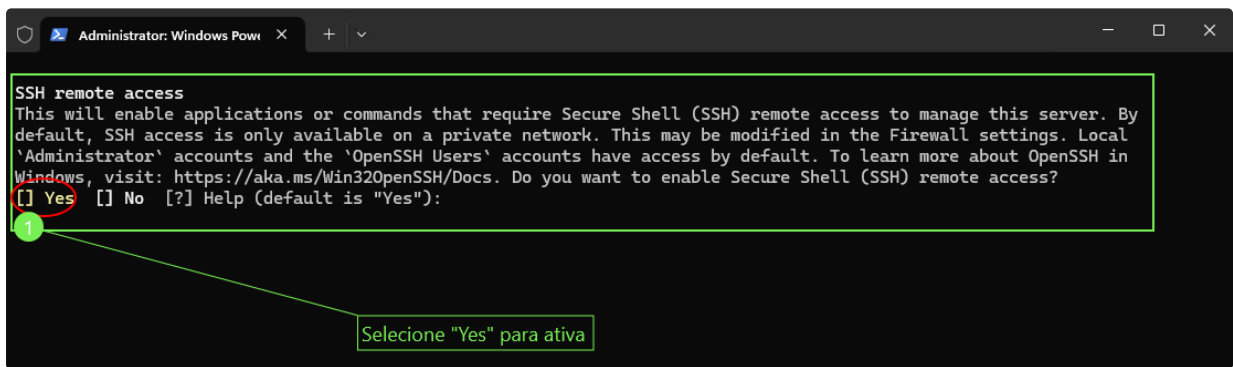

PS C:\Users\Administrator> | O serviço ssh esta desabilitado

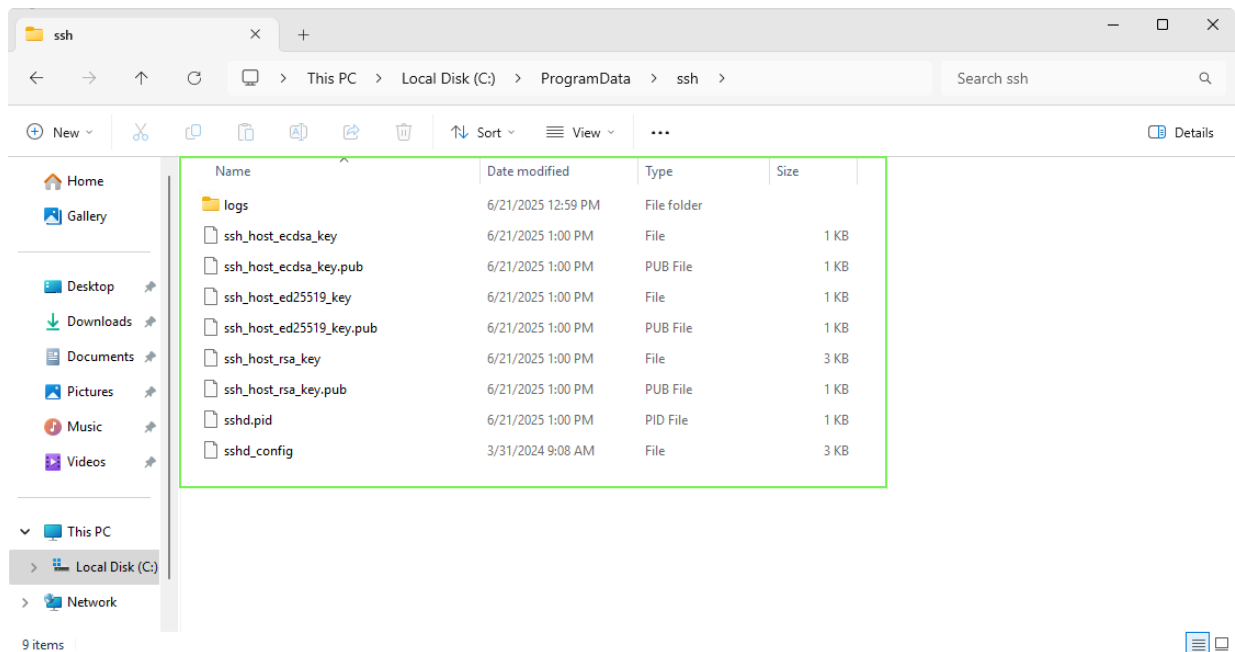

Habilitando o serviço ssh

Configurar inicialização de serviços

```
1 Set-Service -Name sshd -StartupType Automatic
2
3 #Liberar regra de firewall
4 New-NetFirewallRule -DisplayName "Permitir SSH Porta 22" -Name 'Permitir SSH' Profile Any -
  LocalPort 22 -Protocol TCP -Action Allow
5
6
7 New-ItemProperty -Path "HKLM:\SOFTWARE\OpenSSH" -Name DefaultShell -Value
  "C:\Windows\system32\WindowsPowerShell\v1.0\powershell.exe" -PropertyType String -Force
```

Configuração no Ansible

Documentação para configuração de conexão SSH ao Windows Server

🌐 Windows SSH — Ansible Community Documentation

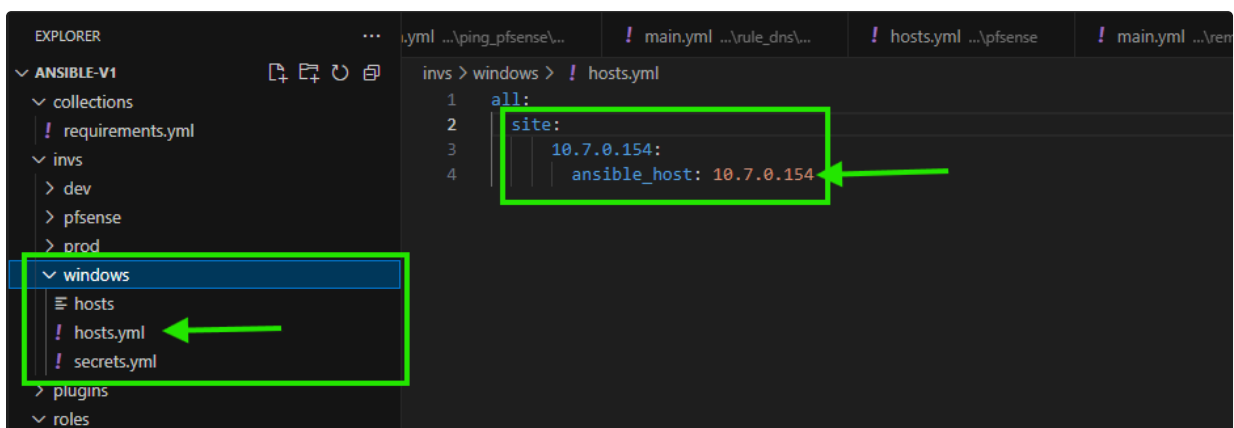

https://docs.ansible.com/ansible/latest/os_guide/windows_ssh.html

O inventário do Ansible é um arquivo que define os **hosts** (máquinas) que serão gerenciados. Ele pode ser escrito em **formato INI**, **YAML** ou **dinâmico** (via script ou plugin).

```
1 [windows]
2 winserver1 ansible_host=192.168.1.100
3
4 [windows:vars]
5 ansible_connection=ssh
6 ansible_user=Administrator
7 ansible_password=SuaSenhaAqui
8 ansible_shell_type=powershell
9 ansible_ssh_common_args='-o StrictHostKeyChecking=no'
10
```

```
invs > dev > hosts
1 [site]
2 localhost ansible_connection=local
3
4 [windows] 1 host Windows server 2025
5 10.0.50.50
6
7
8 [windows:vars] 2 Variaveis de configuração
9
10 ansible_connection = ssh
11 ansible_shell_type = powershell
12 ansible_ssh_common_args = '-o StrictHostKeyChecking=no'
13
14
15
```

```
invs > dev > ! hosts.yml
1 all:
2   site:
3     hosts:
4       localhost:
5         ansible_connection: localhost
6
7   windows:
8     hosts:
9       10.0.50.50:
10        ansible_connection: ssh
```

Executando tarefas

Um **playbook** do Ansible é um arquivo YAML que define um conjunto de tarefas a serem executadas em um ou mais hosts. Ele é usado para automatizar configurações, instalações, execuções de scripts e muito mais.

Teste de ping

```
! windows_ping copy.yml
1 - hosts: windows 1 Host que sofretam ateração
2   - name: Ping Windows
3     ansible.windows.win_ping: 2 Tarefa que sera executada
```
